ROTALIGN® PRO

☺ Short Instructions
for Version 3.1x (rev. c)

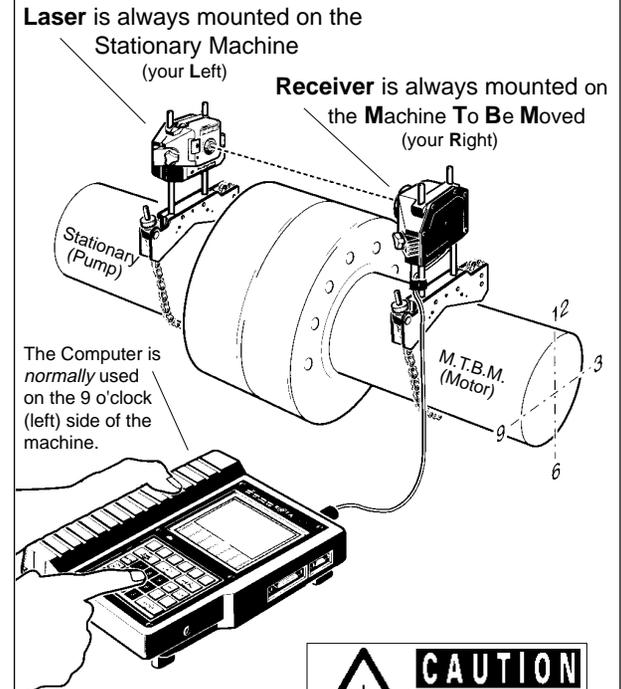

by

Voelzow & Company, Inc.
704-233-9222

1. Mount ROTALIGN® PRO & Press

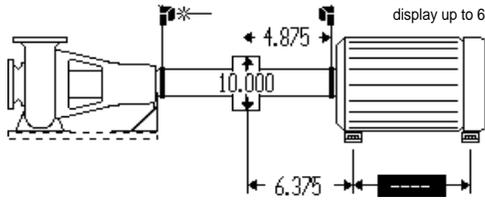

To adjust the display contrast in the Start-up Screen, press & hold  to lighten and  to darken.

Note: To return to the Start-up Screen & Program Manager *anytime*, press , 

2. Press Align Shafts (Soft Key)

Dimension reference mark on top of the Receiver. ϕ Indicates dimensions shown are for machines number 1 and 2. PRO can display up to 6 machines!

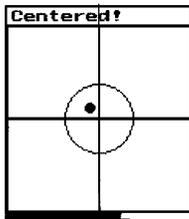

1. Coupling diameter — Use 10" 
2. Coupling center to receiver  
3. Coupling RPM 
4. Coupling center to front foot 
5. Front foot to back foot 

Dimensions can be entered as decimals or fractions.

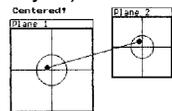

For example press 9.75 
or press 9  3 / 4 

3. Press Measure

Adjust thumbwheels on laser to center of travel. Then switch on and adjust beam onto center of receiver dust cap by sliding laser up or down on risers. Loosen bracket to adjust for side-to-side. (Avoid using the fine adjustment thumbwheels just yet.) Remove cap and center dot on targets.

IMPORTANT!!
Check the XY VIEW!

For Fine Adjustment: Up/down (Y-axis)—use top thumbwheel. Side-to-side (X-axis)—use side thumbwheel.

3a. Soft Foot Check

1. Press  ,  ,  .

2. Using the   keys, select a foot, and press  loosen the bolt, press 

and re-tighten bolt. Repeat step #2 for all feet. Using

feeler gages — reduce the Soft Foot to 2.0 mils (.002").

Note: The largest number is usually the Soft Foot!

3b. Measure continued — Press

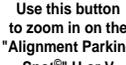

Verify "Centered", then Turn shafts or press  and rotate one complete turn (or a minimum of 75°); press 

4. Press for Alignment Results

Vertical (Side view) Left machine Alignment (Coupling) shown here Right machine Support (foot) side view

Coupling results

Tolerance indicators

Use this button to zoom in on the "Alignment Parking Spot" H or V 

Horizontal (Top view) to Results at Feet Alignment - Gap & Offset (symbols show direction)

5. Press for Results at Feet

Vertical (Side view) Left machine Right machine

Feet results [mils]

Tolerance indicators

Results at Feet shown here

Horizontal (Top view) to Results at Coupling (Alignment) Saves File Front foot & back foot "positions" - used to get corrections

Note: The optimum position to set the Laser & Receiver for a Horizontal Move is 3 or 9 o'clock!

6. Press Move **Do Not Loosen the Bolts Yet!**

Horizontal Move: Use the Move function to monitor or keep the horizontal position! Be sure to press  to monitor only the Horizontal changes even if you are going to shim! This lets you control the Horizontal even while you shim & still see the "Alignment Parking Spot"!

1. If "Centered" — move will start automatically! If not "Centered" — the Rotalign goes to the XY view.

Adjust laser into inner circles then press  . You should be watching the changes at the feet. If not, switch by pressing .

2. Loosen bolts and shim or move the machine.

3. Re-tighten bolts and then press .

Note: For very large horizontal corrections adjust horizontally before shimming. Note: If you are having trouble making your horizontal move you need to check Soft Foot again! Press  and select "Softfoot check" or for tough Soft Foot problems — "Softfoot wizard"!

7. Recheck, go back to step 3b.

Receiver Live Mode Indicator — LED's

	Red LED	Green LED	Screen
