Sensor Error

For the **Rotalign** or **Rotalign Pro** —

If "sensor error" message appears on screen

- **The cable can be damaged.**
  Try changing to a back-up cable. If you need to order a cable, the part number is ALI 3.581-2 for the 6' cable and ALI 3.581-5 for the 16' cable.

- **A lense may be dirty.**
  Check lenses to be sure there are no oily smudges on them

- **The configuration could have been changed.**
  To check this last possibility, go to the configuration screen.

  On the **Rotalign —**
  from the startup screen, select "CONFIG" and make sure the sensor port is set to "DEFAULT" — not to "COM."

  On the **Rotalign Pro —**
  from the startup screen, press "MORE" and select "DEVICE/ CONFIG" and make sure it says "TOP" next to the connector icon. If "SIDE" is selected, this is the problem. Change it to "TOP."
